

Asmi Career Counselling App

Scope document

Project Overview & Justification

Purpose:

ACC seeks to establish a unified digital platform (web application + mobile app) to enable students to view admission status for JEE / HSC (or equivalent) exams, browse college options, and access counselling services. This platform will also serve as ACC's public face, presenting its services, guiding prospective students, and managing paid subscriptions.

Why This Project is Needed:

- Provide a professional online presence for ACC — increasing credibility and reach.
- Offer students a self-service, convenient way to check admission status and view colleges, reducing manual support overhead for ACC staff.
- Enable a subscription-based (paid) access model, ensuring that only paying students get restricted access to premium features.
- Scale ACC's services to a larger, possibly national audience (all India colleges/states).

Primary Goals / Objectives (High-level):

- Build a responsive, easy-to-use web application for public information, student login, profile & data entry, college browsing, admission status tracking, payment integration.
- Build mobile applications (Android + iOS) to give students access to core functionalities on-the-go.
- Provide ACC administrators with a back-office portal to manage college data, admission schedules, cutoffs, seat allotments, student subscriptions, and send notifications.
- Ensure secure authentication and payment flow, maintaining privacy of student data and subscription/payment records.

Project Scope

Included (In-Scope) Features and Deliverables

- **Public Website (Informational)**

- Home / Landing page with ACC overview, services, mission, contact information, FAQs, testimonials.
- Static pages: About Us, Services, How It Works, Contact, Terms & Conditions / Privacy Policy, etc.
- Subscription / Sign-up flow: allow prospective students to subscribe / pay to gain access.

- **User Authentication & Subscription Management**

- Registration / login functionality (email / mobile / OTP or as agreed).
- Role-based access control: at least “Guest/Visitor”, “Student (subscribed)”, and “Admin / Counsellor / Staff”.
- Payment gateway integration (supporting major Indian payment methods: UPI, cards, net banking, wallets).
- Payment receipts / invoice generation; subscription validity tracking; subscription status in user profile.

- **Student Portal (Web + Mobile)**

- Student profile creation and management (personal data, contact, state / domicile, category, etc.).
- Entry of exam/marks details (e.g. JEE rank, HSC marks, category, etc.).
- Database-driven list of colleges across India, with metadata: state, city, courses, eligibility, previous-year cutoffs / closing ranks, seat matrix / quotas (if available), fees (if data provided).
- Search and filter functionality for colleges (by state, course, category, eligibility, etc.).

- Display of admission schedules for all states: registration dates, counselling rounds, seat allotment dates, result dates, reporting dates, etc.
- Admission status tracking per student: once rounds begin, students can see their status per state — e.g. Applied, Allotted, Waitlisted, Rejected, Document verification pending, etc. Also college allotted, course, seat category/quota, reporting instructions (if applicable).
- Access to historical data: last year (and earlier) cutoffs / closing ranks / seat matrices — for reference and comparison.

● **Notifications & Alerts**

- Ability for ACC admin to send notifications (email / SMS / in-app / push) to subscribed students about important events: registration deadlines, counselling rounds, result announcements, seat allotments, reporting dates, payment reminders, etc.

● **Admin / Back-office Portal**

- Admin login with role-based privileges (Admin, Counsellor, Data Entry, Support, etc.).
- CRUD operations for: colleges database, courses, seat matrices / quotas, cutoffs / closing ranks, admission schedules (all states), seat allotment results, state-wise counselling data.
- Student subscription and payment management (view payment history, subscription status, renewals, pending payments).
- Dashboard / analytics: total users, active subscriptions, admitted students, application counts by state, etc.
- Option to upload data in bulk (for example, colleges list, cutoff data) via CSV / Excel import.
- Report generation (as needed).

● **Mobile Applications (Android + iOS)**

- Core features: student login, profile, view colleges, search/filter colleges, view admission schedule, view admission status, view notifications.

- Secure login & subscription validation.
- Push notifications (or in-app notifications) for alerts / updates from admin.
- Responsive / performant UI; offline caching of previously viewed data (optional, depending on design).

- **Documentation & Handover Materials**

- System design documentation, database schema, API documentation (if REST / microservices used), deployment instructions (for staging & production), maintenance / support guidelines.
- Training materials (if required) for ACC admin / counsellor staff on how to use back-office portal.
